Known Issue

- A firewall can restrict/drop unwanted inbound WAN traffic such as VPN requests. The router's firewall block rules can stop remote management and VPN access. It is recommended to review the firewall settings before upgrading.
- For "ax" series model:
The wireless clients might encounter unexpected trouble (e.g., unable to use the printer on LAN) while accessing into Internet if the hardware acceleration is enabled.
To skip hardware acceleration for certain devices, the following telnet command can be used:
`ppa -E -e 1`
`ppa -E -a AA:BB:CC:XX:XX:XX nat/bridge/ipsec`

Note

- IPsec HMAC (MD5) is no longer supported.
